

## Press Release

Fiorano (MO), June 2011

### Northern Europe won over by the technologies and know-how of System Logistics

Spendrups, a Swedish leading company, has placed a new order with System Logistics for a project that involves the

construction of a system capable of concentrating finished product storage and optimizing distribution at the Spendrups

Brewery in Grängesberg. The system will consist of 12 stacker cranes to accommodate approximately 47,000 pallet slots.

Spendrups order follows the two big Carlsberg Automatic Case Picking systems by System Logistics for a new mixed pallet creation technology which allows Carlsberg to match with its high demanding distribution needs. Cases are automatically depalletized and the single SKU's are then diverted in Buffering/Sequencing Modules (VLS). From there, thanks to a patented best fitting software and an innovative Automatic Single Case Palletizers, the mixed Order pallets are then created. The best fitting software fully developed by System Logistics, chose in a blink of an eye the best

possible pallet configuration as far as concerns stability, space occupancy, ergonomics, among billion of different

possible configurations. Branded MOPS® (Modular Order Picking System), infact, could be scaled up by adding Modules thanks to its modularity.

Carlsberg and Spendrups decision to select System Logistics as their supplier is a testament to the excellent results the Italian company has achieved in recent years in the food and beverage sector. Technologies dedicated to the beverage sector and technical design expertise led to the creation of a partnership and a relationship based upon mutual trust between the food and beverage companies and System Logistics.
