

Press Release

Fiorano (MO), October 2016

System Logistics and Krones at BRAU 2016

System Logistics, a growing leader in storage and order fulfillment solutions for the Beverage industries, will be co-exhibiting at Brau 2016 with KRONES Group. This is the first time the two companies will showcase their full portfolio of solutions that range from filling and packaging to storage of product and distribution.

On show

At Brau, from November 8th to 10th, System Logistics will display a **counterbalanced AGV with forks**. This unit is designed for the transportation of pallets or bins (steel, plastics, wood) and is able to transport unit loads of different dimensions. The WMS (Warehouse Management Software) package, developed by System Logistics, gives users the ability to control inventory and material handling and manage loading/unloading operations, searching for materials and locations, speeding up picking operations and creating detailed reports.

System Logistics

With a long-term focus on the food and beverage industry, System Logistics has designed some of the world's largest automated warehouses for soft drinks and beer.

The skill of System Logistics' global team is in the design of complete automated warehousing systems, automatic picking and transport systems- that include high speed shuttles, conveyors and Automated Guided Vehicles (AGV) for goods handling.

System Logistics solutions portfolio includes:

- AS/RS - Automated Storage and Retrieval Systems for managing pallets through stacker cranes
- MOPS - Modular order picking system that can handle a high quantity of individual items completely automatically
- FRS - Fast Rotation Storage in low bays used as a production buffer before shipment as well as for high density storage
- AGV - Automated Guided Vehicles driven by a laser guidance technology used to automatically transport material autonomously from point to point and to store and retrieve Unit Loads out of multi-level racks.
